ACAUTION

Cautions when using

⚠WARNING

- Fill the cup with drink in temperature from 5°C to 40°C. Otherwise, scald may When there is hot liquid such as hot water in the cup, never cover the cup with
- cap. Otherwise, scald may occur due to leakage or overflow. In addition, the cup body may become hot. Be careful when using. Keep the cup out of the Do not give the mug to the baby when the liquid temperature is high. The hot

drinking or taking it out.

caused by violent impact.

Otherwise, drink may overflow from the cup mouth due to rise of internal pressure caused by air expansion in the cup, thus causing scald.

ACAUTION

- Be sure to use the parts sold separately for the Lakumug series.

 During use, if the straw or air vent's outside is pressed hard, the straw or air vent may sink. Therefore, do not press them.

 Do not drop or bang on the mug. It may cause damage to the product.

- Neep the product away from heat source.

 Do not place the product in high temperature places such as a car in summer for a long time. Otherwise, deformation or damage of the product or drink overflow or leakage may occur.

 Do not put the product in the refrigerator. Otherwise, deformation or damage may occur.

 Stop using immediately if any crack, damage, deformation or missing parts are identified.

 Do not use the product to store carbonated drinks. Otherwise, drink may overflow.

 If you open the cap in a rush when using the first straw or straw, drink may flow out from straw tip Only an adult is allowed to slowly open the cap.
- Cautions for silicon parts such as Drinking spout and Inner straw
- You may notice white powder on the surface. This is a safety food additive.
 Silicon parts are consumable parts. When any damage is found on the surface, stop using immediately and replace with a new one.
 The silicon parts may not be elastic and become easily damaged for prolonged use, causing leakage. It is recommended to replace the parts in time.

Cautions when microwave heating

- Take extra care when microwave heating. Always stir heated food to ensure even heat distribution and test the temperature before serving.
- Ensure you follow the instructions below.

Lakumug series First cup Standard cup 200r Large cup 300ml

determined according to the growth situations of children. In addition, adults should help children

First straw 4 months +

Straw type

Lakumug first straw is a straw type mug that can be used for training of drinking.

To assit the child's smooth transition from nipples to transition from nipples to straws, the drinking spout is designed with an enlarged base transitioning to the straw shape, so baby can easily hold it in their mouth like a nipple.

• When baby holds the ctraw in their mouth

can easily hold it in their mouth like a nipple.

When baby holds the straw in their mouth, the base of the straw is pressed and water of an appropriate amount flows out from the tip of the straw. As baby drinks they are learning how to use the straw by holding it in their mouths, pushing and sucking.

a little, you will hear a click sound. When you use the product, slowly
open the cap. To close the cap, press it downward until a click sound is
heard, which means the cap is locked.

① As shown in the figure, install the drinking spout. Insert the spout

part into the adapter from the inner side and push it to outer side with both hand. When insert, align the central part of the spout part with the protruding part of the adapter.

② As shown in the figure, insert the inner straw all the way until it reaches the — line.

※ After the inner straw gently pull the straw to ensure that it cannot be pulled out.

③ Install the handle on the cup.

⚠ WARNING When microwave heating, keep drink at the temperature same as human body. If drink is ively, scald may occur wher

Cold resistance

- After microwave heating, the cup may become hot. Be careful when taking it out to prevent scald.
 Do not microwave heat a sealed mug as the mug may break and hot drink may leak causing injury.
 If the drinking spout is bited hard or prolonged biting, it may crack or break depending on children teeth's growth situation. Make sure there is no break before use since the broken part may be swallowed. to superheating effect (※). Leave the heated cup for 1 minute before taking it out. Also, keep the

 - swallowed.

 For your child's safety and health

 Always use this product with adult supervision.

 Continuous and prolonged sucking of fluids will cause tooth decay.

 Always check food temperature before feeding.

 Keep all components not in use out of the reach of children.

ACAUTION

- Do not use the Lakumug for any purpose other than a mug.
 Do not give the mug to children with parts disassembled. Otherwise, small parts may be swallowed protruding parts may hurt the throat or eyes, and fingers may be pinched in gaps.

 Correctly install the parts and firmly attach the adapter in the specified position according to this manual
- Incorrect installation may cause leakage.

ACAUTION

- by attention to the types with automatic switching functions.
 Sefore heating, make sure that the chamber of the microwave oven cools down
 on the that an empty cup.
 Only heat the cup. Remove all other parts.
- Only heat the cup. Remove all other parts.

 Manually set the heating power of the microwave oven below 500W.

 Do not heat the drink that contains a lot of oil and sugar as the temperature may become very high
- ink, do not use the automatic cooking function. Be sure to shorten the heating time Drink may overflow due to microwave heating. Therefore, do not fill the drink beyond the MAX line

- Cautions during outing

 Lakumug is leak-proof design, but the drink inside may still leak out depending on the storage conditions or position. Leakage may occur if the mug is stored horizontally or upside down.

 When you carry the cup in a bag, do not make the cap open. In addition, when the cup contains cold drink, condensation occurs on the surface of the cup, thus producing water drops. In this situation, place the cup in a sealed bag just in case.

 When the cup contains drink with the temperature higher than human body temperature, pressure in the cup will rise which may cause leakage. Fill in the cup after the drink cools down.
- which the cup will rise, which may cause leakage. Fill in the cup after the drink cools down.

 when the drink cooled in a refrigerator is filled in the cup, the drink may leak due to rise of pressure in the cup caused by temperature difference inside and outside the cup. Place the cup in a bag that can be sealed just in case.

 Never use the mug to carry formula milk when outing, otherwise the milk may go bad.

First cup 5 months +

ACAUTION

13

• How does drink flow out from the first cup

Put spout part on the lower lip and hold the edge of the spout part with lips. The slit can be opened to let the water flow out only when children hold the drinking spout in their mouths.

Care and storage

Washing method

Washing method

Disassemble the mug immediately after using, soak in warm water, wash carefully using neutral detergent for dishes and dry thoroughly.

Carefully wash the drinking spout of the first straw and straw and the inner straw using detergent for dishes, and rinse off with water.

The slit of the first cup is prone to crack. Therefore, wash it carefully. Do not put your finger in it or pull it to open.

If the air valve gets drity, clean it gently with a toothpick. Rinse the cap with story running water if there is dirt on the inner side.

All the cap with story running water if there is dirt on the put of the cap with story control washing to the company of the direction of the direction of the detergent for dishwasher or dryer, use the relevant neutral detergent. For clealis, follow instructions of the detergent for dishwashers.

Do not use commercial dishwashers or detergent for commercial dishwashers.

Before the children can drink water with the straw

Hold the straw in the mouth...Water of an appropriate amount flows out

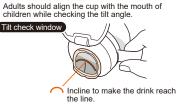

When children hold the straw in their mouths, the base of the straw is pressed and water of an appropriate amount flows out from the tip of the

Start training

When using the cup for the first time, children do not know the tilt angle. Adults should provide help.

Tilt angle (target tilt angle)

Snrink lips at the base of the straw and suck out a small amount of water. After a child can proficiently drink water with the "first straw", use the "straw". The tip of the straw is expanded to form a shape that makes it easy for children to keep the straw in the mouth and drink water.

Shrink lips...Suck water

Shrink lips at the base of the straw and suck

Disinfection and sterilization method

Sterilizing using a microwave oven
 Use a sterilization tool for nursing supplies. For details, follow instructions for each tool.

Storage

• Keep the mug out of the reach of the children as the small parts may pose a chocking hazard.

Learn drinking water with the straw

ACAUTION

lor or odor may remain. Immended to replace with new ones if the parts contaminated with color cannot be cleaned

Storage

Wash the cup immediately after using. If the cup is left unused for long, bacteria may grow or the drink color or odor may remain.

It is recommended to replace with new ones if the parts contaminated with color copped by classes.

It is recommended to replace with new ones if the parts contaminated with color cannot be cleaned even after washing or bleaching.
 Wash using a soft dish sponge. Apply neutral detergent and follow the instructions of the detergent.
 Damage may be caused to product from bleaching, chemical sterilizing, boiling or sterilizing using a microwave oven particularly if done on a frequent basis.
 If you boil the cup using little hot water or a small pot, the product may closely contact with the pot, thus causing deformation.

※It is target. Let the child repeat continuously until the child can do it. The sequence ①→② is not necessarily followed. Guardians do not need to worry. Enjoy yourself while feeling the growth of children.

10

12

ACAUTION

If foreign objects such as food are blocked in the slit of the drinking spout, leakage may occur because the slit is always in the open state.

The drinking spout is consumable part If a drinking spout is used for a long time, leakage may occur due to loss of elasticity expansion of the slit and crack.

If the cup is placed horizontally while the cap is open, drink may leak.

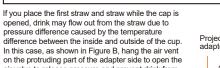

When drink flows out from the tip of the straw

ACAUTION

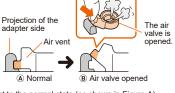

When you give children warm drink or fill cold drink in the cup and place the cup for some time, drink may flow out from the tip of the straw. Fully release pressure in the cup. In addition, when you expand the air vent using fingers, drink may also flow out from the air vent. Please be cautious.

 If the cup is kept with the cap opened, drink may flow out from the straw due to change of the surrounding environment. If you want to leave the cup for a while, close the cap.

Release

opened, drink may flow out from the straw due to pressure difference caused by the temperature difference between the inside and outside of the cup. In this case, as shown in Figure B, hang the air vent on the protruding part of the adapter side to open the air valve to release pressure and prevent drink from flowing out from the straw.

**If you overturn and carry the cup in the state shown in Figure B, drink may spill out. Before handing over the cup to children, be sure to restore the air vent to the normal state (as shown in Figure A). **As shown in the illustration in "Caution" above, press the air vent with fingers to make it deform and temporarily release pressure.

蓋子的關閉方法 ******

11

置時,請將蓋子關閉。 關閉蓋子時,請勿觸碰防漏吸

實際開始使用時間,請根據兒童發育狀況綜合判斷 另外,在兒童能夠自行飲用之前,成人應予以幫助
